TETTENBORN

Solid Porcelain TR Refrigerators

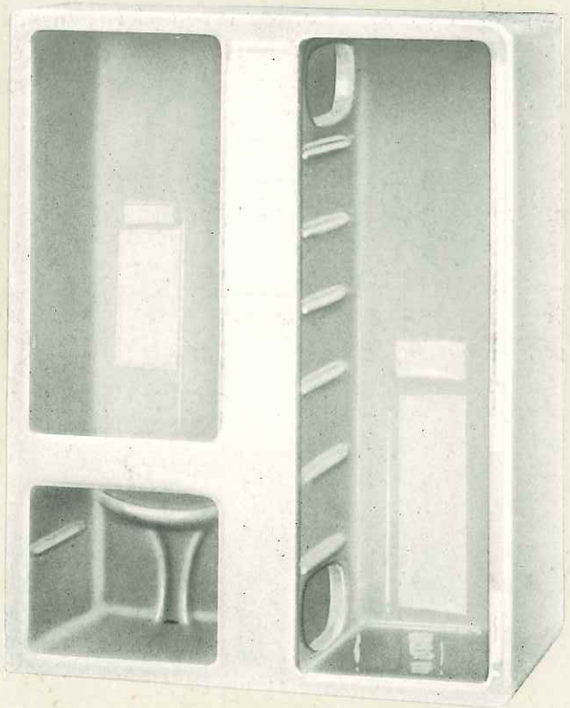
THE RESULT OF A LIFETIME DEVOTED TO PERFECTING AN ABSOLUTELY PERMANENT SANITARY REFRIGERATOR THAT WILL GIVE PERFECT REFRIGERATION AT THE LOWEST POSSIBLE COST AND ONE WHOSE UTILITY AND BEAUTY RECOMMEND IT.

BEAVER REFRIGERATOR & POTTERIES CO.
NEW BRIGHTON, PA.

TETTENBORN

Solid Porcelain Refrigerators



(Patented)

THIS IS THE INTERIOR.

REAL GENUINE SOLID PORCELAIN WARE OVER AN INCH THICK, MOULDED IN ONE PIECE AND FIRED AT OVER TWENTY-FOUR HUNDRED DEGREES OF HEAT. THE PURE WHITE SURFACE IS ALWAYS SWEET AND CLEAN. THE ADDED INSULATION THE THICKNESS AFFORDS SAVES ICE.

BEAVER REFRIGERATOR & POTTERIES CO.
NEW BRIGHTON, PA.

TETTENBORN

Solid Porcelain Refrigerators

AFTER careful study and an experience extending over many years we offer you in the TETTENBORN REFRIGERATOR the highest possible achievement in refrigerator construction, and as briefly as possible we desire to point out the many distinctive features.

On the preceding page you will observe the construction of the lining. The entire ice and food compartments as well as the drain are combined in ONE PIECE OF SOLID PORCELAIN WARE—porcelain meaning a kind of earthen ware and not iron or steel enameled (commonly called porcelain) which peals or chips easily and then rusts, and to which dirt and grease adhere.

The glaze of the lining is of the same nature as the body and retains its pure white surface indefinitely, thereby making it as easy to clean as a new dish.

The ice chamber being an integral part of the SOLID PORCELAIN lining remains permanently sanitary, for there are no metal parts to rust out and no soldered joints to collect dirt.

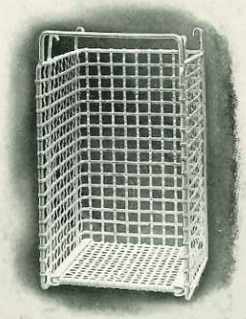
On the rear wall of the food compartment under the ice chamber you will note the patented drain—a channel moulded in the wall, yet an integral part of the compartment, open at its front so that cleaning can be done instantly and thoroughly.

BEAVER REFRIGERATOR & POTTERIES CO.
NEW BRIGHTON, PA.

TETTENBORN

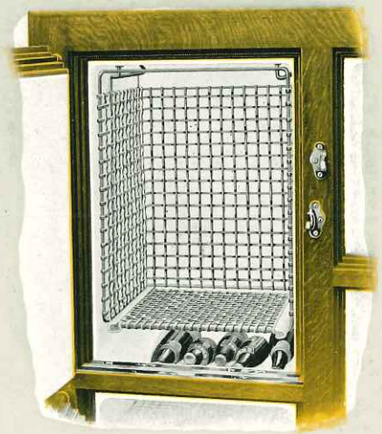
Solid Porcelain TR Refrigerators

In the elimination of the drain pipe we have made possible the manufacture of a sanitary refrigerator—a refrigerator in which filth does not collect—a refrigerator in which the food does not become contaminated.



Suspended from the roof of the ice chamber is a galvanized wrought iron carriage in which the ice rests, and the construction of which is such that the cold air descends from the bottom and all sides of the ice through the opening in the porcelain floor directly into the food compartment.

The carriage slides on two hangers so novel in construction that without fastenings or catches of any kind the ice carriage is securely locked when placed in position, and yet is instantly removable.



Its clever construction holds the ice carriage so that the porcelain floor may be utilized for chilling bottles, greens, etc., by the drippings from the ice.

Where warm bottles are placed on the ice they quickly melt into the ice, but our improvement saves this waste.

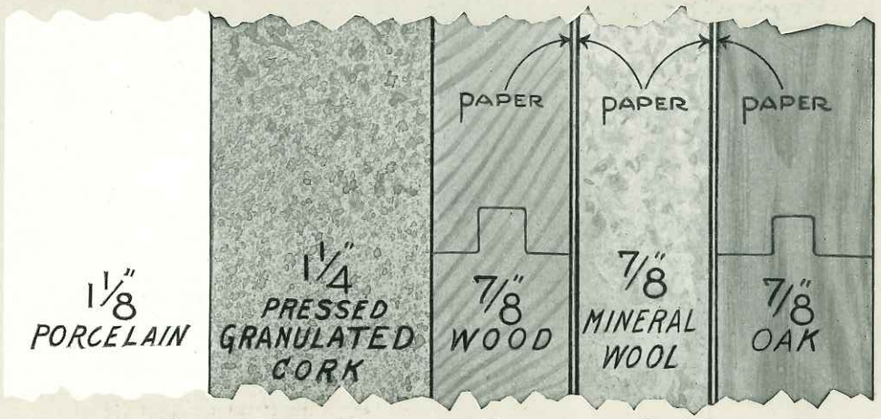
BEAVER REFRIGERATOR & POTTERIES CO.
NEW BRIGHTON, PA.

TETTENBORN

Solid Porcelain TR Refrigerators

In the construction of the TETTENBORN ONE-PIECE SOLID PORCELAIN REFRIGERATOR we have not been satisfied to stop with the superior lining, but by the accompanying illustration you will observe that the insulation and exterior case are of the same high quality.

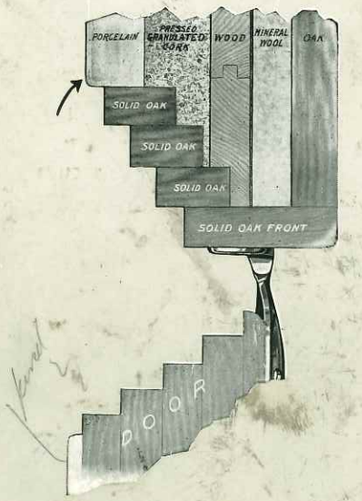
Long and careful study and thorough tests have taught us how to secure the best results, and if you will measure our walls and compare them with others you will know why TETTENBORN REFRIGERATORS use less ice.



THIS IS THE ACTUAL THICKNESS AND CONSTRUCTION OF OUR WALLS

The exterior case is of solid oak, tongued, grooved, and thoroughly glued, being without thin panels; this is coated on the inside with a mineral paint, then there are two courses of thick insulating paper, then seven-eighths inch of mineral wool well packed between cleats, then two courses of thick insulating paper, then seven-eighths inch of tongued and grooved lumber, and then from one and one-fourth to one and one-half inches of coarse, granulated cork tightly packed between the inner wall of tongued and grooved lumber and the SOLID PORCELAIN WARE compartments more than an inch in thickness.

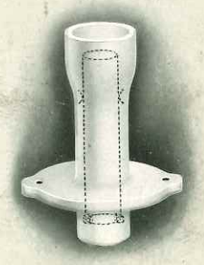
BEAVER REFRIGERATOR & POTTERIES CO.
NEW BRIGHTON, PA.



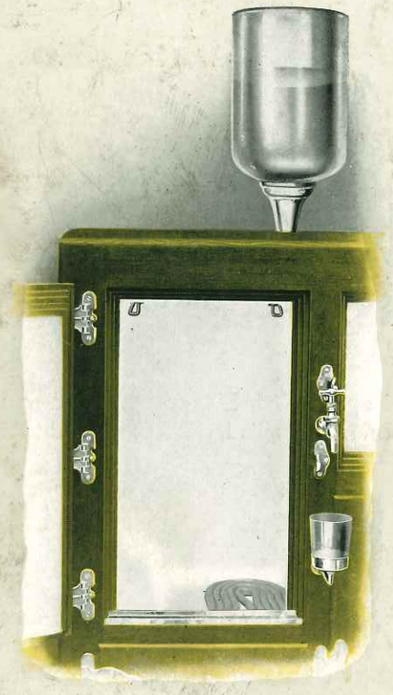
This illustration shows the edge of the SOLID PORCELAIN projecting beyond the front wood frame, thus permitting everything to be washed outside of the compartment instead of up against the frame where dirt and particles of food lodge and decay. By this construction we prevent moisture from being washed into and between the fronts and interiors.

TRAP

The channel terminates in a trap, which is also an integral part of the Solid Porcelain compartment, and is as easily and thoroughly washed as a china cup. The trap is arranged with a loose brass nickel-plated bell which forms the water seal preventing the warm air from outside entering the refrigerator. The outside of the porcelain bottom has a projecting neck moulded onto it over which a brass pipe is connected to carry the waste water outside of the refrigerator; this brass pipe is fitted into a galvanized iron casting and spaced from the sides so that any sweating or condensation on it is also carried outside of the refrigerator and cannot work its way between the floors.



PURE COLD DRINKING WATER



Any of our refrigerators can be fitted with a coil of pure block tin pipe, which is placed in bottom of ice chamber under ice rack where all of the meltings from ice drip thereon continually, one end being connected with the city water supply, or with a cast brass nickel-plated bottle holder arranged on top of refrigerator to hold a three or five-gallon water bottle, and the other end with a faucet at the front of refrigerator. The coils are of different sizes, depending on the size of refrigerator.

The coils are extra and prices will be given on request.

REFRIGERATORS TO ICE FROM OUTSIDE

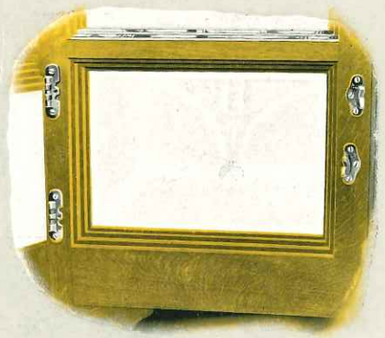
Any of our refrigerators can be arranged with extra doors in back, and a part of them can be had with extra doors on end to ice from the outside.

LOCKS AND HINGES

These are our own special design, perfectly plain but very strong, of solid brass and nickel-plated and having all edges smoothly rounded, harmonizing and being in keeping with the rich and simple plainness of refrigerator. The fasteners are of the lever type, and draw the doors tightly closed and hold them so (no springs to give way). The hinges are of an extension pattern which in opening doors at right angles with front throw them completely aside giving full access to interior.

SHELVES

The shelves are of closely-woven wire, coated with pure block tin.



WORKMANSHIP

The workmanship is the very best, by skilled and careful men of many years' experience, and the cabinet work is not surpassed in the best furniture. The finish is a dark English and is produced by first staining, then applying a paste filler, carefully rubbed into the pores of the wood, then sanded, then shellaced and again sanded, then varnished and again sanded and then a final coat of varnish is applied which is rubbed to a dull finish.

SPECIAL FINISHES TO MATCH SURROUNDING WOODWORK FURNISHED TO ORDER

Our Improved Drain (Patents Pending) Is Really Wonderful:—see the illustration at top of page, no metal pipes in food compartments to become clogged up and hard to clean, but a channel of solid porcelain, which is an integral part of the compartment, open at its front so that cleaning can be done instantly and thoroughly.

Nothing to wear out or break.

On the following pages will be found a number of cuts which show the distinctive features of the "Tettenborn" One-Piece Solid Porcelain refrigerator together with the dimensions and list prices.

Write us for discounts.

No. 25 **List Price, $150.**

Outside Dimensions—

No. 33 **List Price, $180.**

OUTSIDE DIMENSIONS—
33 inches wide - 24 inches deep - 60 inches high

INSIDE DIMENSIONS (*Food Compartment*)—
22 inches wide - 16 inches deep - 24 inches high

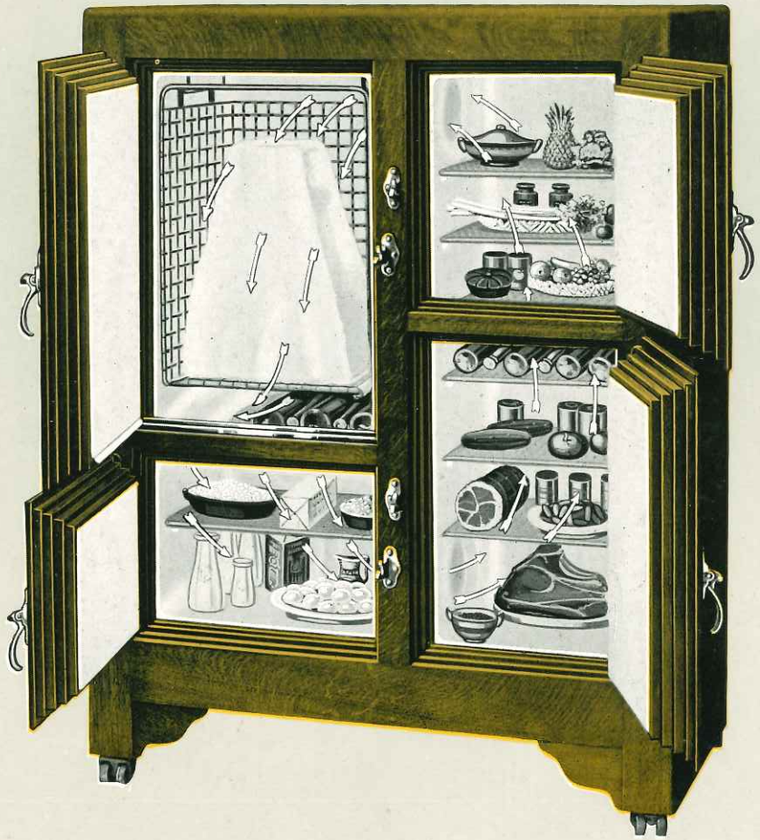
ICE COMPARTMENT (*Capacity, 100 Lbs.*)—
21 inches wide - 16 inches deep - 15½ inches high

SPACE UNDER ICE RACK—4 inches high

BEAVER REFRIGERATOR & POTTERIES CO.
NEW BRIGHTON, PA.

TETTENBORN

Solid Porcelain Refrigerators



THE above illustration shows the direct circulation in "TETTENBORN" Refrigerators having ice compartments on the side or in the center. It shows the removable galvanized wrought iron ice carriage spaced from walls and floor so there is no strain or bearing on the Solid Porcelain ware and protects it against possible injury. It permits the air being cooled on all sides as well as the bottom of ice.

It shows the bottle chilling space.

It shows that there are no dead air or inaccessible places.

It shows the proper arrangement of foods.

ROOKWOOD POTTERY
CINCINNATI, OHIO Sept. 28, 1939.

Messrs. Tettenborn & Company,
341-343 West Fifth St.,
City.

Dear Sirs:-

In sending you a remittance covering your bill for Ice Chest recently furnished me, I wish to compliment you on the great care you have taken in executing my order and the fine quality of workmanship throughout. The porcelain chambers are really wonderful achievements in pottery. My brief experience confirms what I had heard from others who have bought them, that these refrigerators are most economical in consumption of ice and that they entirely justify your claims in other particulars.

Yours very truly,

CINCINNATI, OHIO

CINCINNATI June 27, 1910.

Messrs. Tettenborn & Co.,
City.

Gentlemen:-

We have now been using one of your solid porcelain refrigerators for 12 months and we want to assure you that we have found it to be the most satisfactory refrigerator that we have ever used. We used another make refrigerator for a great many years and we are sure that the consumption of ice in your refrigerator is one half of what it was in the other, and when you take into consideration that our present refrigerator is one third larger than the old one that we had, we consider it a remarkable showing.

Assuring you that we shall take pleasure in recommending your refrigerator to all of our friends, with kindest regards, I beg to remain

Very truly yours,

CINCINNATI, OHIO

CRESCENT APARTMENTS
CINCINNATI, OHIO

Cincinnati, O. Jan. 8th., 1909

Dear Sirs:--

We take pleasure in saying that we use two of your Porcelain Refrigerators, the same are entirely satisfactory in every way. We find that fresh milk kept perfectly sweet in them for three days; and that the refrigerator is kept clean with very little effort.

These refrigerators use a very small amount of ice, indeed they are veritable ice savers.

We are perfectly satisfied with your refrigerators and cheerfully recommend them to our friends.

Yours very truly,

CINCINNATI, OHIO

TETTENBORN

Solid Porcelain TR Refrigerators

THE illustration on this page shows an arrangement of a Butler's Pantry Refrigerator. The following two pages show two sizes of these, but we are prepared to furnish this style refrigerator made in many sizes.

They are compact, but of ample capacity and have the entire interiors; ice as well as food compartments of one piece of Solid Porcelain Ware without a Joint, Crack, or Seam.

We make these to match any woodwork and to conform with architects' details. The arrangement is very simple and permits of a much more convenient and uniform arrangement for the Butler's Pantry.

The ice chambers are arranged with Ice Carriages raised above floor of same so as to permit placing bottles, greens, shell oysters, etc., under ice utilizing the drippings.

The circulation is direct and insures a strong current of pure dry air of uniform coldness in food compartments.

These can also be had with extra doors to ice from outside.

TETTENBORN

Solid Porcelain TR Refrigerators

THE ICE MAN CAN STAY OUTSIDE

if refrigerator is arranged with an extra door in back or at an end so ice can be put into refrigerator from the back porch. This keeps him from coming into the kitchen or pantry and having the drippings from ice on the floors and dirt being tracked in. Any of our refrigerators can be had arranged in this way at a slight extra cost.

Those building new homes or remodeling are generally availing themselves of this convenience which not only saves cleaning up after the ice man, but also the annoyance usually caused.

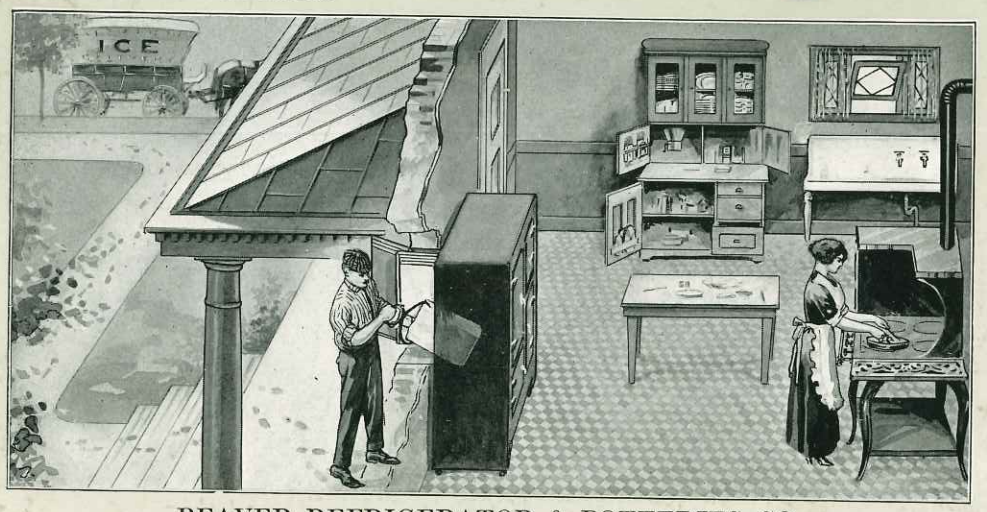
In cold weather by leaving the outside door of refrigerator open a little to admit cold air hardly any ice is required and the saving quickly pays for the small cost of extra door.

Our catalog shows all of the refrigerators with side ice chambers on the left, but we can furnish these with ice chambers on the right without extra charge. We aim to carry, made up, the different sizes of the Solid Porcelain compartments arranged to make refrigerators this way so that as a rule they can also be furnished promptly.

The following pages give the size and location of extra outside icing doors, but we have blue prints ready showing these in detail and shall be glad to furnish same on request.

IN ARRANGING OPENING IN WALLS THE FOLLOWING INFORMATION WILL PROVE VALUABLE: THE OPENING IN WALL OF THE HOUSE SHOULD BE TWO INCHES LOWER AT BOTTOM, AND TWO INCHES HIGHER AT TOP, AND ABOUT THREE INCHES LARGER ON SIDE WHERE FASTENER IS AND ABOUT FOUR INCHES ON SIDE WHERE HINGES ARE, THAN DOOR OF REFRIGERATOR.

All refrigerators are figured with casters; if wanted without casters deduct two and one-half inches.



BEAVER REFRIGERATOR & POTTERIES CO.

59	23¾	30	38¾	3⅝	17½	15½
90	23¾	30	38¾	22¾	17½	34⅝
120	17	20¼	10¼	3½	11	12½
140	17	20¼	10¼	19½	11	28

Where side ice chamber refrigerators are wanted with ice chambers on the right side, the size of doors would be the same, but the distance would be from right end instead of left end. Drain location would also be changed accordingly.

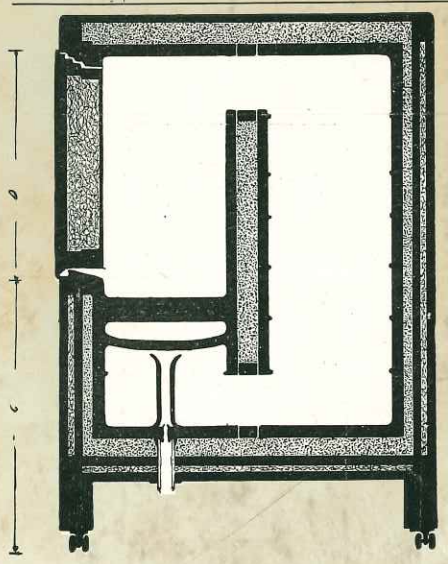
EXTRA END DOORS

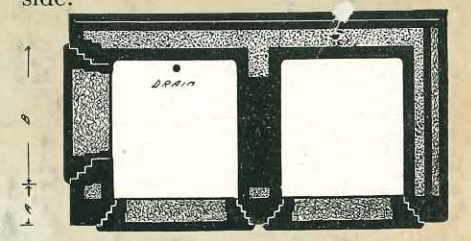
The following are the sizes and locations of extra end doors to ice the refrigerator from the outside, also the location of drain.

Refrigerator No.	Width of Door	Height of Door	Distance from Floor	Distance from Front End	Location of Drain From Front	Location of Drain From Left End
25	16	16¼	41¾	5	17½	14½
33	16	16¼	41¾	5	17½	16½
10	16	20¼	17½	5	11	12½
15	16	20¼	24¾	5	11	12½
30	16	16½	28¼	5	17½	12½
39	16	26	31	5	17½	12½
50	16	26	31	5	17½	13½
52	16	26	31	5	17½	14½
65	16	26	31	5	17½	15½
55	16	26	42¾	5	17½	12½
56	16	26	42¾	5	17½	13½
57	16	26	42¾	5	17½	14½
59	16	26	42¾	5	17½	15½



Refrigerators shown with ice chambers on left side can also be had with ice chambers on right side. The dimensions would be just the same excepting that doors would be on the right side and measurements would be from right end.

Numbers 20, 25, and 33 can only be had with extra end doors on right side.



This cut shows extra end door to ice refrigerator from outside.
